## **Bin Chickens**

Bin chickens have become the ubiquitous villains of Australia's cities over many decades by snatching our sangas, tossing rubbish around like nobody's business and being generally annoying in every way.

But although Aussies are well acquainted with the white ibis in their everyday lives – Sydney alone is thought to be home to more than 7000 of them – there is a lot we still don't understand about the former swamp dwellers.

As researchers Paul Allatson and Andrea Connor write on <u>The Conversation</u>, over the years there have been various pushes from urban Australians, urging local authorities to remove "immigrant" ibises from their neighborhoods'."we

The legend goes that the first ibises in Australia came from Egypt – where they were worshipped in ancient times – and escaped from a zoo.

The Australian white ibis is actually one of three ibis species that are native to this great nation, but their emergence as city slickers is a relatively recent phenomenon.

It used to be rare to see them, but now they are everywhere.

A scenario we're all familiar with.

It is understood that they moved from the interior wetlands because of environmental degradation such as drought and habitat loss.

However, there may be an element of truth in the zoo myth and their history as former exhibits might help explain a jump to big city life.

Many arrived at dusk to spend the night in the trees of the car park behind Zia Pino Restaurant. Merkin was wondering what they tasted like roasted ... probably tough and dry ... he thought.
